

# Vision AI for Healthcare Supply Chain Management

Stop stockouts. Cut waste. Automate reordering.

Chooch delivers the first truly touchless inventory management system for hospitals. Smart cameras, powered by Vision AI, track inventory 24/7 with no scanning, no RFID tags, and no manual counting.

The system integrates directly with Epic, Oracle, Workday, and other major platforms. Chooch's system takes over time-consuming inventory tasks, eliminates errors, and generates purchasing reorder signals, ensuring supplies are always where they need to be.

## Real-World Results

**95%**  
fewer stockouts

**50%**  
higher staff  
productivity

**40%**  
inventory optimization

## What Makes it Different

### No Counting

No tags. No scans. No data entry. Just AI-enabled cameras tracking inventory in real time.

### Predictive Inventory Intelligence

Learns usage patterns to forecast demand, preventing both stockouts and over-ordering before they occur.

### Purchasing Reorders

Goes beyond alerts. Automatically reorders supplies, flags anomalies, and adjusts thresholds. No human input needed.

### Fast, Scalable Deployment

Install in days. Add cameras to expand. No workflow disruption. No staff retraining.

The result? Reliable inventory control that saves time, cuts waste, and improves care.

Hospitals using Chooch AI are freeing up staff time, reducing excess inventory, and ensuring supplies are always available without adding complexity or overhead.
